STATUS / COMPLETED

DESCRIPTION

Land movement:

By adding 900.000 m³ of soil, approximately 17 hectares were reclaimed from the Río de la Plata, from the mouth of the Ugarteche stream and Dock F (Areneras) of the Port of Buenos Aires, within the jurisdiction of the General Port Administration, a state-owned company.

River bank defence:

River bank defence works were carried out by installing a flexible precast concrete system, blending the works into the river with inclined planes, which dissipate the wave energy.

Services:

All necessary services were constructed (drinking water, sewage, gas, electric power, and telephone networks; pavings, sidewalks, and parking areas), in order to serve all the buildings constructed in the premises.

Streets:

Alndoor and outdoor pavings were constructed by hot asphalt surfacing, 7-cm thick, on a 30-cm soil-lime basis, compacted at 99% of standard factor.

Adjoining buildings:

Constructions were made on a covered and semi-covered 7,000 m2 area, the most important of which are:

- Driving Range, with 160 covered tee boxes
- Club House
- Golf School
- Service building, with a restaurant and paddle tennis courts.
- Tennis Club, with eight covered courts
- EG3 dual fuel station (gasoline and natural gas)
- Soccer Club, with five synthetic-grass fields
- Pumper NIC fast food restaurant
- CAIX Discotheque, with capacity for 1500 people

Sanitation Works

AVELLANEDA - PROVINCE OF BUENOS AIRES

CLIENT / LEVER S.A

LOCATION / MANUEL ESTÉVEZ 1130 AVELLANEDA – PROVINCE OF BUENOS AIRES STATUS / completed

DESCRIPTION

Turnkey project and construction of a sewage and industrial effluent treatment plant, civil and electromechanical works.

This plant comprises an anoxic chamber (14 m x 26 m), 3 sedimentation chambers (13 m diameter) and accessory tanks, totaling 1,400 m³ of concrete. Additionally, all the electromechanical equipment was provided and assembled.
